

LOCATION BASED SERVICES AND TRACKING WITH MY BUDDY ONLINE MAP BASED TRACKING INTERFACE FOR INFOSAT'S GPS TRACKING ENABLED DEVICES

Infosat is pleased to introduce MyBuddy; a powerful new tracking and reporting solution. Utilizing both Location Based Services (LBS) and a simple to use online map-based interface, MyBuddy effortlessly interprets and maps the transmission of GPS locations in real-time, allowing you safely connected to your workers, manage your fleet of vehicles or marine vessels, and receive Alerts when warranted.

With numerous options available, your tracking ready device can be configured to send tracking and alert information at intervals of your choosing, and to trigger alerts based on actions like a vehicle's ignition being turned on or off. The tracking and alert information can be used to pull reports based on past journeys, events, alarms, messages received, or user activity. LBS can also be used to trigger SOS Distress signals via SMS in the event of an emergency.

- Compatible With Iridium Extreme Satellite Phone and GPS Enabled Devices Including BEAM Products
- Triggers Automatic Alerts on the Map and by SMS when SOS Button is Triggered
- Map Based Online Software Interface
- Easy to Use - Simply Sign in and Start Tracking
- Reporting on Events, Alarms, Messages, User Activity and Past Journeys
- No Activation Fee For Your Devices

INFOSAT
