

CONNECTING LONE WORKERS

PANIC ALERT is a worker safety feature available on trackitSAT fleet tracking systems. Using two-way satellite technology to send alerts and GPS to track physical location, trackitSAT Panic Alert was engineered for use with Infosat's trackitSAT online map-based tracking software application. At its core, trackitSAT Panic Alert feature is a simple to use "man-down" system that enables everyone including non-experts to send alerts or monitor lone workers.

Easily clipped to any belt; the SuperCell50 device can be used up to a mile away from the receiver. The push of a button on the pager sized device easily activates the alert, triggering an email, and flashing alert beacon on the trackitSAT mapping interface.

trackitSAT makes it easy for your workers to make contact when in distress, or simply request assistance. trackitSAT and its Panic Alert feature allows you to concentrate on coordinating your response to a situation as determined appropriate by your business's safety protocol, not trying to find the worker.

EMERGENCY PREPAREDNESS FOR MOBILE OR LONE WORKER SCENARIOS

The value of providing mobile or lone workers with Infosat's Panic Alert device is in the security it provides to both the worker and employer. Both parties enjoy the awareness that help can be routed to their current location at any time.

Infosat's trackitSAT solution with Panic Alert provides users with a number of features:

- Trigger an alert at distances of up to a mile between the terminal and receiver
- Compact Size (2 7/8 x 1 7/8 x 1 1/2 inches)
- Locate or track a user using trackitSAT map interface
- Light-weight (3.7 oz. Including Batteries)
- Signalling and monitoring via trackitSAT mapping application
- Easy Alarm Activation with Red LED Indicator
- Battery Powered
