

TRACKITSAT TWO-WAY MESSAGING

Having current information is critical to your business, regardless of which road your key players have taken.

The trackitSAT Messaging Terminal, a component of Infosat's fleet tracking solution trackitSAT, meets your need for current two-way information relay from the field regardless of location.

Utilizing satellite communications technology, the trackitSAT Messaging Terminal which is typically installed in a vehicle, allows the user to utilize Infosat's Short Message Service (SMS) and communicate directly with your fleet's dispatch or other similarly equipped vehicles in your fleet. trackitSAT Messaging users can provide critical information, request assistance, send pre-programmed SMS messages, or receive instructions sent from dispatch.

trackitSAT MESSAGING BENEFITS

A key benefit of using the trackitSAT Messaging Terminal is the simplicity of monitoring, responding to, and tracking using the online map-based trackitSAT application and any computer with an internet connection.

- send and receive messages using the trackitSAT solution
- specify a set of pre-programmed messages to utilize during daily operation
- robust, rugged, dust/water resistant keyboard
- worker competency and training
- Backlit LCD screen for low light or night time use.
- Multiple Input Options: USB, Serial, WLAN, Bluetooth, DallasID, and Magnetic Card Reader
